PROFESSIONAL EXPERIENCE

Software Developer

Feb 2026 – Present

McMaster Advanced Space Systems

Hamilton, ON

- Designed and developed the official MASS website using **Next.js**, **TypeScript**, and **Vercel**, creating a scalable platform for recruitment, visibility, and sponsorships, securing **\$1,000+** in funding.
- Implemented **GitHub Actions** CI/CD pipelines to automate testing and deployment, reducing manual integration time by **18%** and eliminating merge conflicts for the development team.

VP Communications

Oct 2025 – Present

McMaster Game Development

Hamilton, ON

- Organized technical workshops on **Unity**, **Godot**, and **Blender** while leading technical outreach and all promotional content, driving a **105%** increase in GameJam participation and securing **\$950** for prizes.
- Led club meetings and coordinated cross-club collaborations, increasing workshop attendance by over 40%.

Financial Advisor Assistant

Jun 2025 – Sep 2025

Investia Financial Services Inc.

Markham, ON

- Engineered automated **Excel**-based portfolio analysis tools for **1200+** client accounts, reducing manual data processing time by **13%** and improving reporting accuracy.

PROJECTS

AI Client File System | [GitHub](#)

- Built a local-first desktop application using **React**, **Express**, and **Electron** that integrates **Claude API** to provide context-aware AI assistance over locally stored client records.
- Architected a custom filesystem-based persistence layer using Node.js, exposing 13+ RESTful API endpoints to manage secure, local-first data storage and real-time chat history.

Task Calendar | [GitHub](#)

- Designed and developed a full-stack task tracker app using **React** and **Vite** built around an interactive calendar with responsive animations and a custom **2D physics engine** written in **JavaScript**.
- Architected a **Node.js** backend and packaged the app as a native Windows desktop binary using **Electron**.

3D Solar System Simulator | [GitHub](#)

- Engineered a real-time N-body gravity simulation of our solar system in **Python** using **Panda3D**, fed and driven using real data and satellite images from NASA.
- Created a custom **3D physics engine** and an object-oriented class hierarchy allowing global rendering logic and ray casting, while isolating per-body behavior.

TECHNICAL SKILLS

Languages: Python, Java, HTML/CSS, JavaScript/TypeScript, C/C++, SQL

Frameworks: React, Next.js, Express.js, Electron, FastAPI, Panda3D, Three.js

Developer Tools: Git, GitHub, Vite, Vercel, AWS Amplify, Claude API, Blender, Figma

EDUCATION

McMaster University

Hamilton, ON

BASc, Honours Computer Science (Co-op)

Sep 2025 – Present

- Honours: Dean's Honour List (GPA: 3.8/4.0)
