PROFESSIONAL EXPERIENCE

Software Developer

February 2026 - Present

McMaster Advanced Space Systems

Hamilton, ON

- Designed and developed the official MASS website using **Next.js**, **TypeScript**, and **Vercel**, creating a scalable platform for recruitment, visibility, and sponsorships, securing **\$1,000+** in funding.
- Established **GitHub Actions** CI/CD pipelines and pull request-based code review processes, enabling the team to develop features in parallel without conflicts.

VP Communications

October 2025 - Present

McMaster Game Development

Hamilton, ON

- Organized technical workshops on **Unity**, **Godot**, and **Blender** while leading technical outreach and promotional content, driving a **105%** increase in GameJam participation and securing **\$950** for prizes.
- Led weekly club meetings while coordinating cross-club collaborations and sponsorships to increase the quality of workshops and broaden community impact.

Financial Advisor Assistant

June 2025 - September 2025

Investia Financial Services Inc.

Markham, ON

- Supported the Branch Manager with daily operational and administrative tasks, building portfolio analysis spreadsheets in **Excel** for **30+** clients, reducing analysis time by **13%**.

PROJECTS

AI Client File System | [GitHub](#)

- Built a local-first desktop application using **React**, **Express**, and **Electron** that integrates **Claude API** to provide context-aware AI assistance over locally stored client records.
- Created a custom filesystem-based persistence layer in **JavaScript** using **Node.js**, exposing 13+ **RESTful API** endpoints to handle client profiles, file uploads, and persistent chat history.

Task Calendar | [GitHub](#)

- Designed and developed a full-stack task tracker app using **React** and **Vite** built around an interactive calendar with responsive animations and a custom **2D physics engine** written in **JavaScript**.
- Architected a **Node.js** backend and packaged the app as a native Windows desktop binary using **Electron**.

3D Solar System Simulator | [GitHub](#)

- Engineered a real-time N-body gravity simulation of our solar system in **Python** using **Panda3D**, fed and driven using real data and satellite images from NASA.
- Architected a custom **3D physics engine** and an object-oriented class hierarchy allowing global rendering logic and ray casting, while isolating per-body behavior.

TECHNICAL SKILLS

Languages: Python, Java, HTML/CSS, JavaScript/TypeScript, C/C++, SQL

Frameworks: React, Next.js, Express.js, Electron, FastAPI, Panda3D, Three.js

Developer Tools: Git, GitHub, Vite, Vercel, AWS Amplify, Claude API, Blender, Figma

EDUCATION

McMaster University

Hamilton, ON

BASc, Honours Computer Science (Co-op)

September 2025 - Present

- GPA: 3.8/4.0, Dean's Honour List
